SUMMARY

Senior Product Designer with 8+ years turning complex industrial IoT systems into interfaces people can trust — built for users in gloves, in glare, on connections that drop. Founding designer of a multi-tenant enterprise Asset Operations Platform across five industrial verticals on web and mobile, owning the full arc from functional analysis to shipped screen, then growing and mentoring a three-person design team to autonomous ownership. An electrical engineer who designs from inside the domain, not at arm's length from it. Strategist by instinct and AI-augmented in practice — Claude-driven workflows with the human deliberately kept in control.

EXPERIENCE

Senior Product Designer · Hash8

Apr 2021 — May 2026

Founding designer on a multi-tenant industrial IoT platform — five verticals; enterprise customers across chemicals, manufacturing, energy and water utilities.

Platform Administration: *The control plane for industrial IoT — where org complexity becomes operational clarity.*

Founding designer of the Asset Operations Platform and architect of its administration layer — nested organization hierarchies, RBAC/ABAC access control, and full device lifecycles across six industrial asset classes. Became the company's primary revenue-generating product, growing ARR from ~\$60K to \$200K+ (~3x) while cutting configuration time ~60% and support tickets ~75% (informed estimates).

Digital Twin Framework: *Mirror the field. Master the outcome — before reality forces the decision.*

Architected a unified digital twin framework spanning asset, system, process, and entity twins — each fused with real-time telemetry, full historical event records, and remote-actionable controls; introduced visual simulation, time-lapse replay, breadcrumb tracking, and incident detection for predictive maintenance.

Dashboards, Reports & Analytics: *Signal over noise — decisions surfaced the moment you land.*

Designed single-pane-of-glass dashboards, configurable grid reports, and trend analytics across four applications — surfacing KPIs, alert insights, and asset health as the default landing surface and collapsing multi-page exploration into action-ready signal.

Notifications & Platform-Wide Systems: *The quiet systems that make a platform feel alive.*

Designed a centralized, application-agnostic notification system — escalation hierarchies, role- and shift-based routing, throttling, and alert-fatigue analytics — alongside cross-organization asset sharing with scoped, revocable access, geofence management, and live map-based asset tracking.

Geist Design System: *Atoms to applications — consistency, engineered.*

Built **Geist**, a mobile design system for iOS and Android on atomic-design principles — WCAG AA foundations through components and patterns — and shipped it to a live production vertical; cut repetitive mobile rework ~80% and made design rollouts ~4x faster (informed estimates).

Smart Factory Operations Platform: *The factory, made legible — from blueprint to bottleneck.*

Led a 10-person team to design **TGSIN**, an Industry 4.0 smart factory platform for a Toyota Group Tier 1 supplier — plant digital twins, 4M analysis, OEE/APQ analytics, and energy management; Hash8's submission was selected by Toyota India over competing firms.

Design Team Mentorship & Enablement: *Building product thinkers — not just product doers.*

Founded and grew the design function from a team of one — onboarding and mentoring three designers across the full product lifecycle to autonomous, end-to-end ownership of dedicated verticals.

UX / Product Designer · Teezle

Jul 2018 — Mar 2021

Dealer-facing fleet IoT products and early product strategy for North America's school-bus ecosystem.

School Bus Fleet Management Portal: *Mission-critical fleets, made manageable.*

Designed a dealer-side fleet management and tracking portal for North America's largest **Blue Bird** school bus dealer — asset administration with role-based access control, real-time location tracking, maintenance workflows, and operational reporting, built for transit-grade safety and uptime.

B2B Billing & Subscription Platform: *From device sold to revenue recognized.*

Designed an end-to-end B2B billing and subscription platform for a fleet IoT company — customer and subscription lifecycle, product catalog, template-driven invoicing, device activation, taxation, and revenue recognition — monetizing device-as-a-service economics.

Product Communication & Thought Leadership: *Where ideas earn their audience.*

Drove product communication and market intelligence — co-published a Solution Management whitepaper via HubSpot, partnered with the CEO on investor pitch decks and GTM narratives, and led competitive analysis and internal product-strategy sessions.

Foundational Years: *Where the craft began — engineering, marketing, and product at the source.*

Joined out of engineering school and trained across three disciplines — software engineering (HTML/CSS/JS, wireframing), marketing analysis, and early product work with the CEO — the foundation for a multi-disciplinary product mindset.

SKILLS

Research & Strategy	User Research · Jobs-to-be-Done · User Personas · Functional Analysis · Requirement Analysis · Product Strategy · Design Strategy · Problem Reframing
Design Craft	UX Design · UI Design · Interaction Design · Information Architecture · Experience Design · Wireframing · Prototyping · Design Systems · Engineering Handoff
Domain & Platform	Multi-tenant SaaS · Enterprise Software · Industrial IoT · Platform Design · RBAC & ABAC Access Control · Design Ops
Process & Validation	Design Thinking · Design Critique · Usability Testing · Product Analytics · Accessibility (WCAG) · Cross-functional Collaboration · Design Leadership · Mentorship
Frameworks	Jobs-to-be-Done · First Principles Thinking · Atomic Design · Systems Thinking · Double Diamond · Heuristic Evaluation · Blue Ocean Strategy · Kano Model · Value Proposition Design · Convention over Configuration
Tools	Figma · Adobe XD · Whimsical · Balsamiq · Marvel · Notion · Obsidian
AI-Augmented	Claude · ChatGPT · Gemini · Perplexity · NotebookLM · Figma AI · Cursor · v0
